

Regulatory statement

About: **Collapsible aluminum tubes**

Delivered to: **Sanofi Winthrop Industrie SA**

1. Product information

1.1. Identification

Material N°	Material description	Customer material N°
1036559	AT_19,0_95,0_DIV_TCY BLC 19X95 AV JT LI	TCY BLC 19X95 AV JT LINHARDT
1047403	AT_35,0_165,0_DIV_TCY BLC 35X165 BCH ERG	TCY BLC 35X165 BCH ERGONOMIQUE
1048152	AT_35,0_165,0_DIV_TCY 100G IBALGIN GEL C	TCY 100G IBALGIN GEL CZ-E
1056150	AT_35,0_165,0_CZ_TCY 100G IBALGIN DUO C	TCY 100G IBALGIN DUO CREM CZ-E

1.2. Product Compounds

Compounds	Description	Supplier	
Printing Inks	Divers	Sun Chemical, AkzoNobel	
External lacquer	PPG0122-001/A PPG0123-001/A NOVACAN-T-W-100-3/A	PPG PPG VPL	
Aluminum	99.7%	AWW, Neuman, Rheinfelden, Talum	
Internal lacquer	PPG-3160-802-B-AF-13811	PPG	
Sealing	D-3992	WAKOL	
Closure	Material	Masterbatch	Supplier
448-1-WE-A	BORMED-HE7541PH	Polywhite 8160-RC	KM Packaging GmbH
20727-WE-HP501L	MOPLEN-HP501L	Polywhite 8555	KM Packaging GmbH

2. Legal compliance - Europe

2.1. EC 1935/2004/EU 2023/2006

It is confirmed that all product components comply with regulation (EC) No 1935/2004 on materials and articles intended to come into contact with food, excluding the requirements set by EU 2024/3190 article 9 (see 2.2). The whole manufacturing process at LINHARDT is in compliance with regulation (EU) 2023/2006 about good manufacturing practices.

2.2. EU 2024/3190

To the best of our knowledge, Bisphenol A, other bisphenols, and bisphenol derivatives—as prohibited under Articles 3 and 5—are not intentionally used in the manufacture of our product. Please note that we have not conducted any testing in accordance with Article 9. However, it is our understanding that Article 9 does not apply to articles that do not intentionally incorporate restricted or prohibited bisphenols.

2.3. EU 10/2011

• Lyondellbasell MOPLEN-HP501L

This product complies with the relevant requirements of Regulation 10/2011/EC (PIM) as amended, applicable to intermediate materials (e.g. plastic powders, plastic granules or plastic flakes). The monomers and additives used to produce this product are listed in the Union List of Authorized Substances of Regulation 10/2011/EC and subsequent amendments.

• Borealis BORMED-HE7541PH

Commission Regulation (EU) No. 10/2011 as amended. All used monomers and additives are listed in Annex I of this regulation.

• Lyondellbasell Polywhite 8160-RC

All the polymers and intentionally added additives comply with the requirements of Regulation (EU) No 10/2011 and its amendments published before the print date of this document. Information regarding components subject to further specific limitations and concerning the presence of dual-use additives is given hereunder.

- **Lyondellbasell Polywhite 8555**

All the polymers and intentionally added additives comply with the requirements of Regulation (EU) No 10/2011 and its amendments published before the print date of this document. Information regarding components subject to further specific limitations and concerning the presence of dual-use additives is given hereunder.

Substances according to (EU) N° 10/2011 Annex 1 with specific migration limits and dual use substances are present. If requested, a LoC with that confidential information can be delivered.

2.4. PPWR - Regulation (EU) No 2025/40, article 5

We confirm that no PFAS are intentionally used in the materials in contact with food (i.e. internal lacquer, cap, sealing). All relevant supplier information and non-use declarations have been reviewed, and based on these documents, any exceedance of the 50 mg/kg fluorine limit set by Article 5 PPWR for food packaging is considered highly unlikely. Following the risk-based approach as proposed by the PPWR regulation PFAS analysis is not required.

Furthermore, the sum of lead, cadmium, mercury, and hexavalent chromium in our products does not exceed 100 mg/kg. Aluminium representing the only material with a realistic potential contribution to heavy metal levels, is tested on an annual basis; by contrast, coatings, inks and other non-metallic components do not typically contain relevant heavy metal levels and therefore do not contribute in practice.

2.5. REACH - Regulation (EC) No 1907/2006

- We confirm and warrant that our products are defined as articles, which do not intentionally release substances.
- Based on the information given by our suppliers, substances listed as SVHC are not present in concentrations higher than 0.1 weight-%.
- Based on the information given by our suppliers, we confirm to the best of our knowledge that substances listed in appendix XIV of the REACH regulation are not present.
- Should anything change in relation to the above-stated information, related to REACH Appendix XIV or the candidate list regarding SVHC, or due to new information regarding our products, our customers will directly be informed.
- Based on the facts given, registration of our articles in the SCIP database is not required.

The regulatory statement was created on the available compliance statements of the suppliers of the used raw materials and does not replace a DoC.

If the product is used by the customer as food packaging without receiving a LINHARDT DoC, it is the customers responsibility to perform appropriate overall and specific migration tests on the final material or article, including organoleptic and NIAS-tests to determine the regulatory suitability for contact with different product types and various end-use conditions.

LINHARDT Viechtach GmbH & Co. KG
