1 INTRODUCTION

This Compliance Bulletin provides key information requested by customers on the West Pharmaceutical Services (West) coating herein. This information is based upon declarations from supplier(s), offered in good faith and is not to be considered a warranty or quality specification. Because final conditions and use of this item are beyond our control, this information should not be substituted for customer's own compliance determinations and tests to assure this item is appropriate for any end use.

Compliance Bulletins are provided upon customer request. Please accept this in lieu of West completing questionnaires or surveys. If you have additional compliance questions as a result of an Agency request, please provide West's Regulatory Team an appropriately redacted copy of the Agency's request with reference to the applicable legislation for review and a response will be provided.

This revision shall remain valid unless a change is made to a product or process impacting the statements herein. Change notifications, where required, are managed in accordance with West's change control process.

2 ADDITIVES OF CONCERN

The following additives of concern are not intentionally added to the coating:

- Aflatoxins
- Alcohol
- Asbestos
- Bisphenol A (BPA)
- Butylated Hydroxytoluene (BHT)
- Dioxins
- Genetically Modified Organisms
- Gluten
- Glycerine or oils derived from the Jatropha plant
- Lactose
- Melamine
- 2-Mercaptobenzothiazole (2-MCBT)
- Nitrosamines
- Ozone Depleting Substances
- Parabens
- Phthalates
- Polycyclic Aromatic Hydrocarbons (PAHs or PNAs)
- Polyvinylchlorides
- Thiuram

West's position on the following additives of concern:

- **Allergens and Excipients:** There is currently no requirement to restrict or ban the use of these substances. Therefore, a general statement regarding Allergens cannot be generated.
- **Metal Catalyst:** The EMEA/CHMP/SWP/4446/2000 (Limits for Residues of Metal Catalysts) is applicable to drug substance and excipients. In the scope of the guideline, metal catalysts are referred to as substances used in the synthesis of the drug substance or an excipient used in medicinal product. Therefore, West has not evaluated metal catalysts.
- **Genotoxic Impurities:** Agency and ICH guidelines on genotoxic impurities provides a general framework and practical approaches on dealing with genotoxic impurities in new active substances. For this reason, the guideline is not applicable.

Docusign Envelope ID: ABBAD2DE-BAA7-4CEE-B546-8B0A16875786

- **Residual Solvents:** The focus of the ICH *Impurities: Guideline for Residual Solvents*, Q3C is on the solvents typically used for purification processes in the synthesis of active substances and in subsequent manufacturing steps (e.g. granulation for tablets) of the finished dosage forms. This does not apply to the manufacturing of pharmaceutical packaging components. Therefore, West has not undertaken reviews on with regards to the residual solvents defined in the ICH Guideline and thus, cannot certify.
- **GMO Genetically Modified Organisms:** The guideline EMEA/CHMP/BWP/135148/2004 (Environmental Risk Assessments for Medicinal Products Containing, or consisting of, Genetically Modified Organisms) and such related guidelines relate to medicinal products, specifically to the active ingredients and excipients a medicinal product is made. Therefore, the guideline is not applicable.

3 FOOD REGULATIONS

Please note: This West Item is not intended to directly or in-directly contact food.

- **21 CFR Parts 174-186**

The Food and Drug Administration outlines regulations for Food Additives under 21 CFR 174 - 186. West Pharmaceutical Services (West) reviews raw materials against these regulations for pharmaceutical packaging components.

A coating containing a material not listed in these sections does not preclude it from use; however, use of a substance included in the Food Additive section may expedite the process of obtaining pre-market approval.

Finally, one or more ingredients in this coating can be found in the Food Additives section under 21 CFR 174-186.

- **Commission Regulation (EU) No 10/2011 of 14 January 2011 on plastic materials and articles intended to come into contact with food**

The European Food Regulation (EU) No 10/2011 of 14 January 2011 on plastic materials and articles intended to come into contact with food clearly excludes rubber items. Please refer to the following:

This Regulation shall not apply to the following materials and articles which are placed on the EU market and are intended to be covered by other specific measures:

(a) ion exchange resins;
(b) ***rubber****;*
(c) silicones.

Therefore, West has not undertaken reviews with regards to Commission Regulation (EU) No 10/2011 and thus, cannot certify.

4 ELEMENTAL IMPURITIES (ICH Q3D)

- **ICH Q3D: Guideline for Elemental Impurities, dated 26 April 2022**

ICH Q3D guidelines apply to applicants of final drug product but recognize direct and/or indirect sources of metals from excipients, catalysts, from components of container closure systems and drug manufacturing equipment.

One or more suppliers have declared the following **Class 1, Class 2A, Class 2B or Class 3** elements are present:

ICH Q3D Class	Element
1	Arsenic
1	Cadmium
1	Lead
1	Mercury
2A	Cobalt
2A	Nickel
2A	Vanadium
2B	Gold
2B	Iridium
2B	Palladium
2B	Platinum
2B	Rhodium
2B	Ruthenium
2B	Selenium
2B	Silver
2B	Thallium
3	Antimony
3	Barium
3	Chromium
3	Copper
3	Lithium
3	Molybdenum
3	Tin

Due to the nature of some used raw materials, this does not guarantee that trace amounts of impurities will not be present.

West does not monitor extractable elements analytically for this coating and therefore cannot provide quantitative data. West Analytical Services can support risk assessments for elemental impurities in drug products (leachables) as well as potential for extractable elements for intended use (extractable simulation) to correlate to final drug product. Please contact **West Technical Support** and/or **West Analytical Services** for additional information.
