C E R T I F I C A T E

We hereby certify that the neutral glass tubing of FIOLAX® has been produced by consistently using a Quality Management System according to ISO 9001:2015 and ISO 15378:2017 as well as in accordance with our *Technical Performance Specification*.

The alkali release measured as per the glass grains test specified for Type I glass according to current Ph. Eur. and US Pharmacopoeia typically ranges within the following values:

0.038 ± 0.005 ml 0.02 M HCl / 1 g glass

With an upper limit for the first hydrolytic class (comparable: water resistance class 1 resp. HGA 1 according to ISO 720, Type 1 according to YBB00252003-2015 and Grade 1 according to ChP 4201) of

0.1 ml 0.02 M HCl / 1 g glass

and (comparable: water resistance class 1 resp. HGB 1 according to ISO 719, HGB1 according to YBB00362004-2015) of

0.1 ml 0.01 M HCl / 1 g glass

our neutral glass tubing of FIOLAX® clear and FIOLAX® amber corresponds to the requirements of the current US Pharmacopoeia for Type I glass as well as to the stipulations of all other known pharmacopoeia (e.g. current Ph. Eur., ChP and JP). Various tests on containers made from FIOLAX® tubing have shown that the arsenic release is well below the limit value of 0.1 ppm As.

The composition of FIOLAX® amber fulfils the requirements for guaranteeing protection against light, e.g. acc. to current Ph. Eur. and USP for containers with wall thicknesses according to ISO 9187 and ISO 8362 resp., and after correct thermal treatment of the containers made of tubular glass.

The content of Barium in FIOLAX® clear is less than 250 ppm.

Declaration of Conformity

The heavy metal contents, e.g. lead, cadmium, mercury and hexavalent chromium of our FIOLAX® tubing and our packing are below 100 ppm, i.e. considerably below the limit values of the US and EU Regulations (article 5, paragraph 4 of Regulation (EU) 2025/40).
