

Technical Statement

Absence of SVHC, CMR and Endocrine disruptors

This letter is for information for the named products listed here below:

Glass Tubing and Glass Rods made of FIOLAX® Pro, FIOLAX® clear, FIOLAX® amber, BORO-8330™, ILLAX® and AR-Glas® from SCHOTT AG, Business Unit Tubing.

Our glass tubing only consists of the substance „glass“, which is a homogeneous inorganic material formed by melting of the raw material mixture, chemical transformation processes at high temperatures and subsequent defined cool down, forming a new random network (glass), where different elements are linked together, typically by oxygen bridges. It is best described as a matrix of network formers (e.g. Si, Al, B, O ...) and network modifiers (e.g. Na, K, Ca ...).

Since our products consist mainly of tempered glass and since glass, as a 'substance' itself (CAS 65997-17-3), is not included in the candidate list, currently our glass products are exempt from the downstream user information duty under REACH (Art. 33). Since the notification obligation in the SCIP database is directly linked to REACH (Art. 33), there is consequently also no corresponding notification obligation for the substance glass.

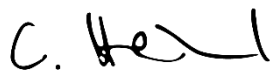

For the production of tempered glass and molded parts, we may use other 'substances' besides glass, which may be already included on the candidate list, classified as CMR or endocrine disruptors. But those 'substances' are completely incorporated in the glass matrix forming the new 'substance' glass while losing their former specific properties. This also applies to all substances that can be classified as impurities in terms of application, since these are also completely incorporated into the network.

Accordingly, the substance glass basically has no ingredients, but consists only of glass.

Based upon our review of the information provided to SCHOTT AG, Business Unit Tubing by its suppliers, we confirm that the products listed above do not contain materials included in the current SVHC candidate list, CMR substances or endocrine disruptors, nor are any such substances present in the products above the applicable threshold (0.1%).
