

Statement on Chemicals, Regulations and Standards

Product reference: **Formpack® Coldform Laminate**
Identifier: TDSP0064-E, FPA006, FPA007, FPA025, FPA030, smat 3132519, 3132521, 3358911, 3391940
as supplied by: AMCOR FLEXIBLES SINGEN GMBH
Alusingen-Platz 1, 78224 Singen, Germany

1. CONEG "Toxics in Packaging" Model Legislation

The product is manufactured in compliance with the Model Toxics in Packaging Legislation (formerly known as CONEG). More specifically, the combined total amount of Lead, Cadmium, Mercury and hexavalent Chromium in above-mentioned material does not exceed 100 ppm.

2. Directive 2011/65/EU (RoHS)

The product meets the relevant requirements of Directive 2011/65/EU regarding Restriction of the use of certain Hazardous Substances in electrical and electronic equipment: Pb, Hg, Cr(VI), PBB, PBDE, DEHP, BBP, DBP, DIBP < 0.1 wt%, Cd < 0.01 wt%.

3. Japan

The following table lists the regulatory status of the components used in manufacturing our product:

table 1 – regulatory status of product components.

Component	Legal Reference	Status
PVC film	Japanese Food Sanitation Act	monomers are included in the Positive Lists for Food Utensils, Containers and Packaging of the Japanese Ministry of Health, Labour and Welfare (MHLW, status 28. April 2020 and subsequent amendments). They are either listed in the list of base polymers for plastics and coatings (table 1 (1)) or in the list of additives (table 2 (1)).

4. California Proposition 65

Amcor Flexibles Singen hereby confirms that the above mentioned product may contain residue traces of the following substances which are listed on the California Proposition 65 List:

- 1,3-butadiene (cas-nr. 106-99-0),
- vinyl chloride (cas-nr. 75-01-4),
- tert-butyl-4-hydroxyanisole (25013-16-5),
- ethylene glycol (107-21-1),
- vinylidene chloride (75-35-4),

Furthermore, with regards to heavy metals mentioned in California Proposition 65, this product is manufactured in compliance with the Model Toxics in Packaging Legislation (formerly known as CONEG). More specifically, the combined total amount of Lead, Cadmium, Mercury, and hexavalent Chromium in above-mentioned material does not exceed 100 ppm.

The concentration of these substances is in compliance with the FDA Food Additive Regulations as well as the European plastics food contact Regulation (EU) No 10/2011 and meet the respective specific migration limits (SML).

5. Animal Origin / Halal / Kosher

The product is not Kosher certified. A Halal certificate is available upon request. The product listed above consists of synthetic and mineral-based raw materials. Nevertheless raw materials derived from animal origin are used for the manufacture of this product. The PVC film of the laminate mentioned above contains a slip agent, for which the usage of animal-sourced substances (fatty acids derived from bovine or ovine tallow) as starting substances cannot be excluded. These are chemically converted via saponification or transesterification. PCR testing of the laminate did show ND results for porcine DNA.

Raw materials derived from animal origin used for the manufacture of this product are produced in compliance with the requirements of Regulation (EC) No 1069/2009 "Animal by-products and derived products not intended for human consumption" and EMA/410/01 rev. 3 (2001/C 73/01) "Note for Guidance on minimising the risk of transmitting animal spongiform agents via human and veterinary medicinal products" from 5th March 2011.

The confirmation is based on raw material regulatory data sheet information provided by our suppliers.

6. Nitrosamines

The following substances are neither intentionally used for the production of the above listed material nor in the manufacture of the respective raw materials

- nitrosamines
- nitrocellulose

Please note, that the following substances are used as components in the production of the laminate:

- secondary/tertiary amines:
 - triethylene diamine (CAS 280-57-9) as an additive in outside adhesive AD4780, no direct contact with sealing layer
 - ϵ -caprolactam (CAS 105-60-2) as starting substance in the production of the polyamide film (outside layer)

In addition, aluminium foil represents an absolute migration barrier and as soon as the lidding foil is sealed onto the blister material a migration of substances through the foil is not possible anymore.

7. Residual Solvents (ICH Q3C)

The production of the material mentioned above uses only such solvents which are categorized as CPMP/ICH/283/95 Class 3 'Solvents with low toxic potential'. The content of residual solvents does not exceed 20 mg/m².

8. EU Resolution AP 89-1

Pigments used in the production of the PVC film comply with the Council of Europe Recommendations AP (89) 1.

9. PVC

Please note that technical datasheet TDSP0064-E indicates that the inside layer is based on PVC (Polyvinyl chloride homopolymer). Vinyl chloride is used as a starting substance in the production of this layer and is compliant to Directive 78/142/EEC resp. EU No 10/2011 ff.

10. Bisphenol A

Based on the information available to us, the following substance is not intentionally used in our raw materials nor added during manufacturing:

- Bisphenol A

We cannot exclude trace impurities resulting from incidental contamination or from impurities in precursors to our raw materials.

Please note that the outer adhesive layer of the laminate contains epoxy-based raw materials which uses BADGE as a starting substance. The adhesive is encapsulated inside the structure between aluminium foil and oPA film and does not interact with the contact layer. Therefore the non-contact layers are not in scope of EU Framework Regulation (EC) No 1935/2004 as it is not expected to be brought into contact with food or to transfer their constituents to food under normal or foreseeable conditions of use. The compliance of the contact layers of the laminate remain unaffected on the outside layer configuration. These layers comply with the requirements of Regulation (EU) No. 2024/3190.

11. PPWR (EU) 2025/40

Regulation 2025/40 on packaging and packaging waste (PPWR) establishes requirements for the entire life-cycle of packaging as regards environmental sustainability and labelling, to allow its placing on the market. It also establishes requirements for extended producer responsibility, packaging waste prevention, such as the reduction of unnecessary packaging and the re-use or refill of packaging, as well as the collection and treatment, including recycling, of packaging waste. The obligation of compliance with the PPWR is on the manufacturer of packaging, that is the packer/filler making the packed product and placing it on the market.

As a supplier of materials for making packaging, Amcor will contribute to this compliance assessment but cannot take responsibility on the compliance of the finished packaging. At the moment of the publication of the PPWR, this Regulation defines the core principles and mechanisms on how packaging will be regulated on the EU market. The precise details against which the compliance of packaging can be assessed, still remain to be published at a later date. To give some key examples among the many others:

Article 5 on requirements for substances in packaging: the Commission will prepare a report on substances in packaging by end of 2026. Actions to deal with those substances will follow later in the form of REACH Restrictions and/or design for recycling criteria.

Following status can be described in accordance with regards to Article 5 point 5:

PFAS are not used; based on testing of relevant samples our product is in compliance with the limit of Article 5 point 5(c); a method to test for the limits in points 5 (a) and (b) does not yet exist.

In conclusion, the details of the PPWR compliance requirements will only become known in the coming years. Until these are implemented, it is not possible to give any sort of general compliance statement with the PPWR. We expect the situation to stabilise in the months leading up to the 1/1/2030 starting date for the minimum recycled content in packaging. Note that the existing requirements on packaging and packaging waste under Directive 94/62/EC are progressively being eliminated between mid-2026 and end-2029, in other words they remain in place today.

12. Dual Use Additives

The following table identifies substances used in plastics and subject to a restriction in food through an authorisation as food additive. In absence of a Union reference list of these substances, there remains some uncertainty over precisely which additives are to be considered as dual use additives. Therefore the following information received from our suppliers could be considered preliminary:

food additive	substance	Classification in Codex Alimentarius
E170	calcium carbonate	Color
E320	tert-butyl-4-hydroxyanisole	Antioxidant
E321	3,5-di-tert-butyl-4-hydroxytoluene	Antioxidant
E330	citric acid	Antioxidant
E339	trisodium phosphate	Antioxidant
E432	sorbitan monolaurate, ethoxylated	Emulsifier, Stabilizer

E464	methylhydroxypropylcellulose	Thickeners, Stabilisers and Emulsifiers
E470a	calcium stearate	Anticaking agent, Emulsifier, Stabilizer
E471	mono- and diglycerides of fatty acids	Thickeners, Stabilisers and Emulsifiers
E500	sodium bicarbonate	pH regulators and anti-caking agents
E551	silicon dioxide	pH regulators and anti-caking agents
E553b	talc	pH regulators and anti-caking agents
E900	polydimethylsiloxane	Anticaking/Antifoaming agent, Emulsifier
E914	oxidized polyethylene wax	Glazing agents, gases and sweeteners

13. Elemental Impurities (ICH Q3D)

Amcor Flexibles herewith confirms that following metals (according ICH Q3D Elemental impurities) are present in the material:

Elemental Impurity	Class		Likely to be Present*			If known, please Identify the Expected Concentration /Units/Range (ppm)	Comments Regarding Source of Information (eg. frequency of testing, process understanding etc)
Arsenic (inorganic)	1	As	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Cadmium	1	Cd	Yes ☐	No ☐	Unknown ☒	Not intentionally added	Material complies with American CONEG resp EU Directive 94/62/EC Art. 11 (Overall content of Pb, Cd, Hg and Cr(VI) < 100 ppm) Analysis done by foil stock supplier via ICP-MS, random testing
Lead	1	Pb	Yes ☐	No ☐	Unknown ☒	Not intentionally added	Material complies with American CONEG resp EU Directive 94/62/EC Art. 11 (Overall content of Pb, Cd, Hg and Cr(VI) < 100 ppm) Analysis done by foil stock supplier via ICP-MS, random testing
Mercury (inorganic)	1	Hg	Yes ☐	No ☐	Unknown ☒	Not intentionally added	Material complies with American CONEG resp EU Directive 94/62/EC Art. 11 (Overall content of Pb, Cd, Hg and Cr(VI) < 100 ppm) Analysis done by foil stock supplier via ICP-MS, random testing
Cobalt	2A	Co	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Nickel	2A	Ni	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Vanadium	2A	V	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Gold	2B	Au	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Iridium	2B	Ir	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Osmium	2B	Os	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Palladium	2B	Pd	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Platinum	2B	Pt	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Rhodium	2B	Rh	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Ruthenium	2B	Ru	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Selenium	2B	Se	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Silver	2B	Ag	Yes ☐	No ☐	Unknown ☒	Not intentionally added	

Elemental Impurity	Class		Likely to be Present*			If known, please identify the Expected Concentration /Units/Range (ppm)	Comments Regarding Source of Information (eg. frequency of testing, process understanding etc)
Thallium	2B	Tl	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Antimony	3	Sb	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Barium	3	Ba	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Chromium	3	Cr	Yes ☒	No ☐	Unknown ☐	0,03 %	Material complies with American CONEG resp EU Directive 94/62/EC Art. 11 (Overall content of Pb, Cd, Hg and Cr(VI) < 100 ppm) Analysis done by foil stock supplier via ICP-MS, random testing
Copper	3	Cu	Yes ☒	No ☐	Unknown ☐	0,05 %	Content in aluminium alloy Analysis done by foil stock supplier via OES-MS 1x/ingot batch
Lithium	3	Li	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Molybdenum	3	Mo	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Tin	3	Sn	Yes ☒	No ☐	Unknown ☐	max. 0,25 % in PVC film	Stabilizer in PVC film, random testing in accordance with Eur Ph.3.1.11 done by PVC film supplier
Aluminum**	4	Al	Yes ☒	No ☐	Unknown ☐	Main component of foil	Material consists of aluminium foil Content in alloy >98% Analysis done by foil stock supplier via OES-MS 1x/ingot batch
Boron**	4	B	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Calcium	4	Ca	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Iron	4	Fe	Yes ☒	No ☐	Unknown ☐	1,1 - 1,7 %	Content in aluminium alloy Analysis done by foil stock supplier via OES-MS 1x/ingot batch
Magnesium	4	Mg	Yes ☒	No ☐	Unknown ☐	0,01 %	Content in aluminium alloy Analysis done by foil stock supplier via OES-MS 1x/ingot batch
Manganese	4	Mn	Yes ☒	No ☐	Unknown ☐	0,03 %	
Potassium	4	K	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Sodium	4	Na	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Tungsten**	4	W	Yes ☐	No ☐	Unknown ☒	Not intentionally added	
Zinc	4	Zn	Yes ☒	No ☐	Unknown ☐	0,05 %	Content in aluminium alloy Analysis done by foil stock supplier via OES-MS 1x/ingot batch

* Likely to be present refers to the metal used in the final manufacturing step and to metals that are used in earlier manufacturing steps and not removed consistently by the manufacturing process.

** These elements are currently not in USP <232>/ EP7.7 (5.20 & 2.4.20), but are elements of potential interest.

14. Drug Master Files

Amcor Flexibles Singen GmbH owns Drug Master Files at the US FDA (DMF No. 15067) and Health Canada (DMF No. 9617).

This specification has also been registered at National Medical Product Administration, NMPA Center for Drug Evaluation under file No. B20180001560 with status "A". Letters of authorisation (LoA) can be issued for this material on request.

15. Pharmacopoeiae

European Pharmacopoeia

The product mentioned above contains rigid PVC film which is in compliance with European Pharmacopoeia, chapter 3.1.11. Our product can be used with regard to the European Pharmacopoeia chapter 3.2.2. "Plastic containers and closures for pharmaceutical use", as the composition of the PVC film is in accordance with the European Pharmacopoeia chapter 3.1.11. "Materials based on non-plasticised Poly(vinyl chloride) for containers for dry dosage forms for oral administration".

US Pharmacopoeia

The product mentioned above contains rigid PVC film for which testing according to USP 661.1 was carried out. The PVC film fulfills the following requirements for oral dosage forms according to USP 661.1: Identification, absorbance, acidity, alkalinity, total organic carbon (TOC) and extractable metals. Furthermore, the PVC film is in accordance with the requirements of USP chapter <87> - Biological Reactivity Test, in vitro.

USP 661.2 does not apply to individual packaging components and is therefore valid only for the entire plastic packaging system.

Chinese Pharmacopoeia

The product mentioned above has not been tested according to Chinese Pharmacopoeia requirements. Nevertheless, the specification has been registered at National Medical Product Administration, NMPA Center for Drug Evaluation. See chapter Drug Master Files.

16. Substances

Amcor Flexibles hereby confirms that the following substance is neither intentionally used for the production of the above listed materials nor in the manufacture of the respective raw materials:

- Acrylamide pigments/ colorants
- Aflatoxin
- Allergens as listed in EU 1169/2011 annex II, as amended
- Antibiotics
- Asbestos
- Azides
- Azocarbonamide
- Azo dyes with carcinogenic amine compounds
- Benzene / Benzidin & their salts
- Benzophenone
- Biocides
- Biodegradable Polymers, including compostable polymers
- Boric acid/Borates
- Bromine-containing compounds
- Carbohydrates
- Regenerated Cellulose
- Cholecalciferol
- CMR substances according to EU MDR: GSPR 10.4.1, 10.4.2 & 10.4.4 > 0,1%

- Dioxins
- Endangered Species of Wild Fauna and Flora
- Ethylene/methacrylic acid zinc polymer
- Ethylenoxid
- Fluorinated gases
- Formaldehyde
- Galactomannan
- Gangliosides
- Gelatin
- GMOs
- Halogenated dioxins and furans
- Human substances
- Hormones/Steroids
- Jatropha plant products (FDA notification to Industry – updated April 2014)
- Mancozeb
- Melamine
- Mercaptobenzothiazole (MBT)
- Mesylates and Tosylates
- Mineral Oil Aromatic Hydrocarbons (MOAH)
- Mineral Oil Saturated Hydrocarbons (MOSH)
- Mycotoxins
- Nanomaterials
- Natural Rubber Latex (NRL), Dried Natural Rubber (DNR)
- Nitrocellulose
- Nitrosamines
- Ozone depleting substances according Regulation (EU) 2024/590, Annex I and II
- PCB (Polychlorinated biphenyls)
- Per- and polyfluoroalkyl substances (PFAS)
- Persistent organic pollutants (POPs) as listed in EU 2019/1021 annex I to IV, as amended
- Pesticides
- Phenol derivatives
- Phthalates
- Polycyclic aromatic hydrocarbons (PAH)
- Polysorbates
- Post-consumer recycled materials
- Propylene glycol
- Silicones as destacking additive
- Styrene Homopolymers (PS, EPS, XPS)
- SVHC (Substances of Very High Concern) $\geq 0,1\%$
- Synthetic Latex
- Titanium dioxide

17. Disclaimer

This declaration is given in good faith and to the best of our current knowledge. It only covers the food contact compliance status of our product as it leaves our premises and does not imply any conclusions regarding technical aspects of the use of our product nor any unforeseen interactions of our product with the packaging process or the filling good.

Kindly also take note of the fact that analyses of our product for the absence of substances are not carried out. The confirmation is based on raw material regulatory data sheet information supplied.

This declaration replaces all previous declarations for the same specification/product. It remains valid until a change in the legislation or new scientific information change the legal status. At such time we will inform our customers accordingly.

Amcor Flexibles Singen GmbH
