

# Statement on Chemicals, Regulations and Standards

Product reference: **Formpack® Coldform Laminate**  
Identifier: FPA010, smat 3204725, TDSP0170-E  
as supplied by: AMCOR FLEXIBLES SINGEN GMBH  
Alusingen-Platz 1, 78224 Singen, Germany

## 1. CONEG "Toxics in Packaging" Model Legislation

The product is manufactured in compliance with the Model Toxics in Packaging Legislation (formerly known as CONEG). More specifically, the combined total amount of Lead, Cadmium, Mercury and hexavalent Chromium in above-mentioned material does not exceed 100 ppm.

## 2. Directive 2011/65/EU (RoHS)

The product meets the relevant requirements of Directive 2011/65/EU regarding Restriction of the use of certain Hazardous Substances in electrical and electronic equipment: Pb, Hg, Cr(VI), PBB, PBDE, DEHP, BBP, DBP, DIBP < 0.1 wt%, Cd < 0.01 wt%.

## 3. California Proposition 65

Amcor Flexibles Singen hereby confirms that the above mentioned product may contain residue traces of the following substances which are listed on the California Proposition 65 List:

- 1,3-butadiene (cas-nr. 106-99-0),
- vinyl chloride (cas-nr. 75-01-4),
- tert-butyl-4-hydroxyanisole (25013-16-5),
- ethylene glycol (107-21-1),
- vinylidene chloride (75-35-4),

Furthermore, with regards to heavy metals mentioned in California Proposition 65, this product is manufactured in compliance with the Model Toxics in Packaging Legislation (formerly known as CONEG). More specifically, the combined total amount of Lead, Cadmium, Mercury, and hexavalent Chromium in above-mentioned material does not exceed 100 ppm.

The concentration of these substances is in compliance with the FDA Food Additive Regulations as well as the European plastics food contact Regulation (EU) No 10/2011 and meet the respective specific migration limits (SML).

## 4. Animal Origin / Halal / Kosher

The product listed above consists of synthetic and mineral-based raw materials and is neither Halal nor Kosher certified. However, the following substances are neither intentionally used for the production of the above listed materials nor in the manufacture of the respective raw materials:

- ethanol for drinking purposes

Nevertheless raw materials derived from animal origin are used for the manufacture of this product. The PVC film of the laminate mentioned above contains a slip agent, for which the usage of animal-sourced substances (fatty acids derived from tallow) cannot be excluded. PCR testing of the laminate did show ND results for porcine DNA.

Raw materials derived from animal origin used for the manufacture of this product are produced in compliance with EMEA/410/01 rev.3 "Note for Guidance on minimising the risk of transmitting animal spongiform agents via human and veterinary medicinal products" and therefore do not present a risk of BSE/TSE.

The confirmation is based on raw material regulatory data sheet information provided by our suppliers.

## 5. Nitrosamines

The following substances are neither intentionally used for the production of the above listed material nor in the manufacture of the respective raw materials

- nitrosamines
- nitrocellulose

Please note, that the following substances are used as components in the production of the laminate:

- secondary/tertiary amines;
  - Triethylene diamine (CAS 280-57-9) as an additive in outside adhesive AD4780, no direct contact with sealing layer
  - $\epsilon$ -Caprolactam (CAS 105-60-2) as starting substance in the production of the polyamide film (outside layer)

In addition, aluminium foil represents an absolute migration barrier and as soon as the lidding foil is sealed onto the blister material a migration of substances through the foil is not possible anymore.

## 6. Residual Solvents (ICH Q3C)

The production of the material mentioned above uses only such solvents which are categorized as CPMP/ICH/283/95 Class 3 'Solvents with low toxic potential'. The content of residual solvents does not exceed 20 mg/m<sup>2</sup>.

## 7. PVC

Please note that technical datasheet TDSP0170-E indicates that the inside layer is based on PVC (Polyvinyl chloride homopolymer). Vinyl chloride is used as a starting substance in the production of this layer and is compliant to Directive 78/142/EEC resp. EU No 10/2011 ff.

## 8. Regulation (EU) 2024/3190 on the use of bisphenol A (BPA) and other bisphenols and bisphenol derivatives in materials and articles intended to come into contact with food

Please note that the outer adhesive layer of the laminate contains epoxy-based raw materials which uses BADGE as a starting substance. The adhesive is encapsulated inside the structure between aluminium foil and oPA film and does not interact with the contact layer. Therefore the non-contact layers are not in scope of EU Framework Regulation (EC) No 1935/2004 as it is not be expected to be brought into contact with food or to transfer their constituents to food under normal or foreseeable conditions of use. The compliance of the contact layers of the laminate remain unaffected on the outside layer configuration. These layers comply with the requirements of Regulation (EU) No. 2024/3190.

## 9. PPWR (EU) 2025/40

Regulation 2025/40 on packaging and packaging waste (PPWR) establishes requirements for the entire life-cycle of packaging as regards environmental sustainability and labelling, to allow its placing on the market. It also establishes requirements for extended producer responsibility, packaging waste prevention, such as the reduction of unnecessary packaging and the re-use or refill of packaging, as well as the collection and treatment, including recycling, of packaging waste. The obligation of compliance with the PPWR is on the manufacturer of packaging, that is the packer/filler making the packed product and placing it on the market.

As a supplier of materials for making packaging, Amcor will contribute to this compliance assessment but cannot take responsibility on the compliance of the finished packaging. At the moment of the publication of the PPWR, this Regulation defines the core principles and mechanisms on how packaging will be regulated on the EU market. The precise details against which the compliance of packaging can be assessed, still remain to be published at a later date. To give some key examples among the many others:

Article 5 on requirements for substances in packaging: the Commission will prepare a report on substances in packaging by end of 2026. Actions to deal with those substances will follow later in the form of REACH Restrictions and/or design for recycling criteria.

Following status can be described in accordance with regards to Article 5 point 5:

PFAS are not used; based on testing of relevant samples our product is in compliance with the limit of Article 5 point 5(c); a method to test for the limits in points 5 (a) and (b) does not yet exist.

In conclusion, the details of the PPWR compliance requirements will only become known in the coming years. Until these are implemented, it is not possible to give any sort of general compliance statement with the PPWR. We expect the situation to stabilise in the months leading up to the 1/1/2030 starting date for the minimum recycled content in packaging. Note that the existing requirements on packaging and packaging waste under Directive 94/62/EC are progressively being eliminated between mid-2026 and end-2029, in other words they remain in place today.

## 10. Elemental Impurities (ICH Q3D)

Ancor Flexibles herewith confirms that following metals (according ICH Q3D Elemental impurities) are present in the material:

| Elemental Impurity  | Class |    | Likely to be Present*        |                             |                                             | If known, please Identify the Expected Concentration /Units/Range (ppm) | Comments Regarding Source of Information (eg. frequency of testing, process understanding etc)                                                                                                       |
|---------------------|-------|----|------------------------------|-----------------------------|---------------------------------------------|-------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

\* Likely to be present refers to the metal used in the final manufacturing step and to metals that are used in earlier manufacturing steps and not removed consistently by the manufacturing process.

## 11. Drug Master Files

Amcor Flexibles Singen GmbH owns Drug Master Files at the US FDA (DMF No. 15067) and Health Canada (DMF No. 9617).

This specification has also been registered at National Medical Product Administration, NMPA Center for Drug Evaluation under file No. B20180001498.

Letters of authorisation (LoA) can be issued for this material on request.

## 12. Pharmacopoeiae

### European Pharmacopoeia

The product mentioned above contains rigid PVC film which is in compliance with European Pharmacopoeia, chapter 3.1.11. Our product can be used with regard to the European Pharmacopoeia chapter 3.2.2. "Plastic containers and closures for pharmaceutical use", as the composition of the PVC film is in accordance with the European Pharmacopoeia chapter 3.1.11. "Materials based on non-plasticised Poly(vinyl chloride) for containers for dry dosage forms for oral administration".

### US Pharmacopoeia

The product mentioned above contains rigid PVC film for which testing according USP 661.1 was carried out. The PVC film fulfills the following requirements for oral dosage forms according to USP 661.1 (early adoption of Dec1, 2025): Identification, absorbance, acidity, alkalinity, total organic carbon (TOC) and extractable metals. Furthermore, the PVC film is in accordance with the requirements of USP chapter <87> - Biological Reactivity Test, in vitro.

USP 661.2 does not apply to individual packaging components and is therefore valid only for the entire plastic packaging system.

### Chinese Pharmacopoeia

The product mentioned above has not been tested according to Chinese Pharmacopoeia requirements. Nevertheless, the specification has been registered at National Medical Product Administration, NMPA Center for Drug Evaluation. See chapter Drug Master Files.

## 13. Substances

Amcor Flexibles hereby confirms that the following substance is neither intentionally used for the production of the above listed materials nor in the manufacture of the respective raw materials:

- Acrylamide pigments/ colorants
- Aflatoxin
- Allergens as listed in EU 1169/2011 annex II, as amended
- Asbestos
- Azides
- Azocarbonamide
- Azo dyes with carcinogenic amine compounds
- Benzene / Benzidin & their salts
- Benzophenone
- Biocides
- Biodegradable Polymers
- Boric acid/borates
- Bromine-containing compounds
- Carbohydrates
- CMR substances according EU MDR: GSPR 10.4.1, 10.4.2 & 10.4.4 > 0,1%
- Ethylendiamine
- Formaldehyde
- Galactomannan
- Gangliosides
- GMOs
- Halogenated dioxins and furans
- Human substances
- Hormones/Steroids
- Jatropha plant products (FDA notification to Industry - updated April 2014)

- Melamine
- Mercaptobenzothiazole (MBT)
- Nanomaterials
- Natural Rubber Latex (NRL)
- Nitrocellulose
- Nitrosamines
- Ozone depleting substances
- PCB (Polychlorinated biphenyls)
- Per- and polyfluoroalkyl substances (PFAS)
- Phenol derivatives
- *p*-Phenylenediamine
- Polycyclic aromatic hydrocarbons (PAH)
- Polysorbates
- Persistent organic pollutants (POPs) as listed in EU 2019/1021 annex I to IV, as amended
- Post-consumer recycled materials
- Phthalates
- Regenerated Cellulose
- Silicones
- Styrene Homopolymers (PS, EPS, XPS)
- Titanium dioxide

## 14. Disclaimer

This declaration is given in good faith and to the best of our current knowledge. It only covers the food contact compliance status of our product as it leaves our premises and does not imply any conclusions regarding technical aspects of the use of our product nor any unforeseen interactions of our product with the packaging process or the filling good.

Kindly also take note of the fact that analyses of our product for the absence of substances are not carried out. The confirmation is based on raw material regulatory data sheet information supplied.

This declaration replaces all previous declarations for the same specification/product. It remains valid until a change in the legislation or new scientific information change the legal status. At such time we will inform our customers accordingly.
